

BABATUNDE OLADEJO

Senior Software Engineer | Backend & Full-Stack Systems

Oyo, Nigeria | Open to Remote & Relocation | babatundeoladejo16@gmail.com | +234 810 299 2169

[LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Senior Software Engineer with 6+ years of experience building banking, fintech, and enterprise software across the full delivery lifecycle. Hands-on with TypeScript, Node.js, React/Next.js, Laravel, Django, PostgreSQL, AWS, API integrations, transaction workflows, and role-based systems. Led a team of three engineers, owned technical decisions from requirements through deployment, and delivered workflow automation in regulated and fast-moving environments. Interested in senior backend and full-stack roles where correctness, reliability, and product ownership matter.

CORE SKILLS

Backend: Node.js, TypeScript, JavaScript, Express.js, NestJS, Laravel/PHP, Django/DRF, REST APIs

Frontend: React, Next.js (App Router), Tailwind CSS, Redux, Context API, component systems

Data & Architecture: PostgreSQL, MongoDB, Redis, Supabase, RBAC, RLS, event-driven design, idempotency, transactional outbox

Cloud & Delivery: AWS (EC2, S3, RDS, Lambda, CloudFront, DynamoDB), Docker, Jenkins, Vercel, CI/CD, code review, Agile delivery

PROFESSIONAL EXPERIENCE

Software Engineer — Engineering Leadership Responsibilities

Sep 2024 – Feb 2026

Sterling Bank Ltd.

Nigeria

- Facility Management Platform: Led architecture and full-stack delivery of a multi-module internal platform using Next.js and Supabase/PostgreSQL for secure departmental workflows.
- Designed normalized relational schemas and role-based access controls, collaborating with compliance and operations stakeholders on audit-sensitive requirements.
- Built reusable TypeScript/Tailwind components and modular client-state patterns that improved consistency, maintainability, and delivery speed across product modules.
- Investigated performance bottlenecks and optimised critical screens, queries, and data-loading behaviour.
- Travel Loan Platform: Designed and delivered a working platform within a two-week window, integrating third-party flight APIs, loan workflow rules, validation, and PDF document generation.
- Automated travel-loan processing steps and document preparation, reducing manual handoffs for operational teams.

Senior Software Engineer — promoted from Software Engineer

Oct 2019 – Dec 2024

Dufuna Technologies

Nigeria

- Led a team of three engineers across sprint planning, task coordination, code review, technical guidance, and delivery tracking.
- Acted as a primary technical decision-maker across multiple products, translating product and design requirements into implementable engineering plans.
- Designed and implemented REST APIs and backend services using Node.js and Laravel for workflow-heavy applications and third-party integrations.
- Deployed and supported applications on AWS using EC2, S3, and RDS, with Jenkins-based CI/CD pipelines.
- Standardised frontend architecture and review practices to improve maintainability, onboarding, and code quality.

Junior Software Engineer

Sep 2018 – Oct 2019

Cotta & Cush Ltd.

Nigeria

- Developed responsive production UI components from design specifications using React and SASS.
- Improved frontend performance and collaborated with cross-functional teams to deliver customer-facing features.

SELECTED ENGINEERING PROJECTS

Checkcite — *Enterprise inspection and incident-management platform* | Next.js, Supabase/PostgreSQL, Firebase | [View](#)

- Designed the system architecture and implemented workflow automation that connected inspection findings to issue ownership, deadlines, notifications, and escalation.
- Modelled role- and organisation-scoped access for administrators, supervisors, inspectors, and handlers; evolved reliability by moving critical side effects toward backend-owned processing.
- Worked with operational stakeholders to turn spreadsheet-based inspections into a central workflow for assignments, findings, issue tracking, and resolution.

Distributed Wallet Engine — *Independent engineering project* | NestJS, PostgreSQL, Redis, Kafka, Next.js

- Implemented a ledger-based transaction prototype using atomic PostgreSQL transactions, double-entry entries, row locking, idempotency controls, and transaction reversals.
- Modelled asynchronous event delivery with a transactional outbox, Kafka consumers, signed webhooks, retry behaviour, and simulated concurrency and failure scenarios.
- Built a Next.js operational dashboard for inspecting wallets, transactions, ledger entries, webhook attempts, and service health.

PPP Partner Portal — *GovTech workflow platform* | Next.js, Django/DRF, PostgreSQL, Paga, Celery

- Designed and built workflows for PPP opportunities, Expressions of Interest, payment initiation and verification, proposals, contracts, signatures, milestones, and close-out.
- Implemented role-based partner/admin access, structured contract terms, ReportLab PDF generation, and partner-first signing rules.
- Integrated Paga payment initiation and callback verification, separating payment-attempt state from EOI workflow state.

Safiba — *Safety-alert and community platform* | React Native, Next.js, Supabase, AWS | [View](#)

- Designed mobile and web product flows for location-based safety alerts, communities, notifications, and offline-aware reporting.
- Worked across authentication, data access, map-based experiences, cloud deployment, and operational troubleshooting for a multi-platform product.
