Oyo, Nigeria | Open to Remote & Relocation (Onsite/Hybrid) | babatundeoladejo16@gmail.com | <https://github.com/TundeOladejo/> | <https://www.linkedin.com/in/babatunde-oladejo/> | <https://babz-portfolio.vercel.app/> | +234 810 299 2169

SUMMARY

Senior Software Engineer with 6+ years of experience designing and delivering fintech platforms, transaction-driven systems, and enterprise-grade applications. Specialized in building high-reliability financial workflows, event-driven architectures, and scalable backend services handling real-time data processing..

Led engineering teams of 3–5 developers across multiple product lines, driving technical decisions, sprint execution, and delivery timelines. Proven ability to reduce processing times by 40%, ship critical products within aggressive deadlines, and integrate complex third-party financial services.

Passionate about building technology that enables financial inclusion and community-driven wealth systems.

EDUCATION

Osun State University

Nigeria

B.Sc. Animal Science

Self-taught software engineer with 6+ years of professional production experience, continuous learning through industry certifications and hands-on project delivery.

EXPERIENCE

Software Engineer (Engineering Leadership Responsibilities)

Sept 2024 – Present

Sterling Bank Ltd.

Nigeria

Facility Management Platform (Internal Enterprise System)

- Led architecture and full-stack implementation of a multi-module internal platform using Next.js (App Router) and Supabase (PostgreSQL)
- Designed normalized relational schemas and implemented role-based access control (RBAC) for secure departmental workflows
- Built a reusable frontend component system (TypeScript + Tailwind CSS), reducing feature delivery cycle time by 30%
- Introduced modular state management architecture (Redux + Context API) for complex workflow coordination
- Conducted performance audits and implemented optimizations, reducing critical screen load time by 40%
- Collaborated with compliance and operations teams to deliver secure and audit-ready systems

Software Engineer (Engineering Leadership Responsibilities)

Sept 2024 – Present

Sterling Bank Ltd.

Nigeria

Travel Loan Platform (Fintech Product)

- Designed and built a Travel Loan Platform within a 2-week delivery window, integrating third-party flight APIs and automated PDF workflows
- Implemented end-to-end financial processing workflows, including user input validation, loan approval logic, and document generation
- Integrated external flight data services to enable real-time travel booking within loan workflows
- Automated document generation (PDF) for loan records, improving operational efficiency and reducing manual processing
- Reduced loan processing time by 40% through workflow automation and system optimization

Software Engineer → Senior Software Engineer (Leadership & Architecture Focus)

Oct 2019 – Dec 2024

Dufuna Technologies

Nigeria

- Led a team of 3 engineers, coordinating task execution, sprint planning, and delivery timelines
- Conducted code reviews, mentorship, and technical guidance, improving team productivity and code quality
- Acted as the primary technical decision-maker across multiple project
- Designed and implemented RESTful backend services (Node.js, Laravel), improving API response times by 40%
- Built and scaled applications supporting complex workflows and real-time data processing
- Standardized frontend architecture patterns, improving maintainability and onboarding efficiency
- Collaborated with product and design teams to translate requirements into clear engineering deliverables

Software Engineer (Junior)

Sept 2018 – Oct 2019

Cotta & Cush Ltd.

Nigeria

- Developed production-ready UI components from design specifications using React and SASS
- Improved application performance by 20% through optimization strategies
- Collaborated with cross-functional teams to deliver user-facing features

PROJECTS

Distributed Wallet Engine (Event-Driven Architecture) | Tech: Kafka, Node.js, Next.js, PostgreSQL

- Designed and implemented a wallet infrastructure system supporting credit, debit, and balance management operations
- Built using an event-driven architecture (Kafka) to ensure reliable transaction processing and decoupled services
- Implemented idempotent transaction handling to prevent duplicate or inconsistent financial operations
- Designed ledger-style data models ensuring transaction traceability and auditability
- Simulated real-world financial scenarios including concurrent transactions, failure recovery, and message reprocessing
- Structured the system to support scalability and future integration with payment providers and financial services

Partner Portal Platform (In Development) | Tech: Next.js, TypeScript, Tailwind CSS

- Building a full-featured partner management portal with role-based access and multi-step workflows
- Implementing responsive design and reusable component architecture

Opulence Realty Platform | Tech: Next.js, TypeScript, Tailwind CSS | [opulencerealty](https://opulencerealty.com)

- Developed a real estate platform with property listings, search functionality, and lead capture
- Focused on performance optimization and SEO for organic traffic growth

TECHNICAL SKILLS

Languages & Frameworks: TypeScript, JavaScript, Node.js, React, Next.js (App Router), Laravel (PHP), Express.js

Architecture: Event-Driven Systems, Microservices, RESTful APIs, Distributed Systems

Databases: PostgreSQL, Supabase, MongoDB, Redis

Infrastructure: Kafka, Docker, CI/CD pipelines, Vercel, AWS basics

Security: RBAC, Row-Level Security (RLS), JWT, OAuth

Frontend: React, Next.js, Tailwind CSS, Redux, Context API, Component Libraries

Practices: System Design, Code Review, Agile/Scrum, Performance Optimization, Technical Mentorship

ADDITIONAL VALUE

Proven ability to lead and coordinate small engineering teams

Hands-on experience designing financial systems and transaction workflows

Strong ownership mindset with ability to operate in startup and scaling environments

Focused on building systems aligned with real-world financial behaviors and user needs
